

HAVE YOU OR A LOVED ONE BEEN DIAGNOSED WITH SCHIZOPHRENIA? **PAID ONLINE SURVEY**

Individuals with a diagnosis of Schizophrenia are invited to participate in a paid online study about the side effects of atypical antipsychotic medications and the impact the side effects have on daily life.

The purpose of the study is to understand how specific adverse events due to treatment with atypical antipsychotics affect the functioning of patients with schizophrenia: both physically and mentally, as well as quality of life from a patient perspective. We are hopeful this information will help developers of such treatment become more aware of such impact from medications.

Patients who have started a new treatment within the past 12 months are invited to participate by clicking on the following link or copying it to the search bar.

<http://www.surveygizmo.com/s3/3750593/Med-Health-Canada>

(This link is for residents of Canada only. If you live in the United States or Australia, please contact us for the link specific to your country.)

The honorarium is a **\$40 USD Amazon Gift Certificate** and the survey takes about **10-30 minutes** to complete, depending upon the answers. (The certificate will be mailed to a valid address of the participant.)

ALL information is strictly confidential. If one chooses to take a break and return to the survey later, **it must be completed within 5 days of starting.**

For questions about the study or if there is a technical difficulty, please contact Linda or Erin at PillarMentalHealth@gmail.com or call 908-698-1038.
